

ORDINANCE NO. 28847

1 AN ORDINANCE relating to Electric Energy; amending Chapter 12.06 of the
2 Municipal Code, “Electric Energy – Regulations and Rates,” for two rate
3 adjustments of 3.5 percent, effective April 1, 2023, and 3.5 percent,
4 effective April 1, 2024; amending Section 12.06.225, to remove an out-
5 of-date contract requirement, effective April 1, 2023; and amending
6 Section 12.06.300, to adjust the cost for additional poles for private off-
7 street lighting, effective April 1, 2023.

8 WHEREAS Tacoma Power’s revenue requirement analysis indicates
9 that retail revenue needs to increase by approximately \$41.4 million for the
10 twenty-four month rate period starting April 1, 2023, which translates to a
11 system-wide retail rate increase of 3.5 percent in 2023 and 3.5 percent in 2024,
12 and

13 WHEREAS Tacoma Public Utilities (“TPU”) has experienced substantial
14 inflationary increases in operating and capital expenses such as materials,
15 personnel, city assessments, and technology upgrades, and the proposed rate
16 increase is designed to generate additional revenue to meet financial metrics
17 (debt service coverage and liquidity), operational needs, and to avoid future
18 rate shocks, and

19 WHEREAS Tacoma Power has made efforts to keep the rate increase at
20 a level that is as low as is consistent with the Public Utility Board’s (“PUB”)
21 Strategic Directive SD-3 regarding rate stability, and

22 WHEREAS Tacoma Power has prioritized new budget additions and
23 reduced its initial Operation and Maintenance and Capital planned spending to
24 mitigate increases in 2023/2024 biennial budget, and
25
26

1 WHEREAS Tacoma Power plans to use its current cash reserves and
2 anticipated wholesale sales revenue to ensure that the retail rate increases are
3 limited to the requested system-average increase of 3.5 percent in 2023 and
4 2024, and
5

6 WHEREAS additionally, Tacoma Power will increase investment in the
7 Bill Credit Assistance Plan (“BCAP”) program and support enhancement of the
8 program to offer more financial assistance to income-constrained customers,
9 and
10

11 WHEREAS the enhanced BCAP program will significantly reduce bill
12 payments for participating income-qualified customers and more than offset the
13 proposed rate increases for participating customers, and is also designed to
14 help mitigate future rate increases for income-constrained power customers,
15 and
16

17 WHEREAS Tacoma Power conducted a Cost-of-Service Analysis for the
18 2023/2024 biennium to determine how to raise the \$41.4 million additional
19 revenue among different rate classes, which have different usage characteristics,
20 and, consequently, the cost of providing services to each class will differ, and
21

22 WHEREAS the proposed annual class rate adjustments effective April 1,
23 2023, and April 1, 2024, respectively, are the following: residential class,
24 3.9 percent; small general class, 1.5 percent; general class and Shore Power,
25 5.0 percent; and street and highway lighting class, 7.0 percent, and
26

1 WHEREAS there are no proposed rate adjustments for the following rate
2 classes: traffic signals and lights, private off-street lighting, high voltage general,
3 contract industrial, New Large Load, ElectroFuel and Electric Vehicle Fast
4 Charging, and
5

6 WHEREAS this proposal is in alignment with industry ratemaking
7 standards and best practices, as well as the PUB's Strategic Directives of
8 Financial Sustainability and Rates, and supports Tacoma Power's Long-Range
9 Financial Plan, and
10

11 WHEREAS Tacoma Power also proposes a change to the fee for
12 additional poles in Section 12.06.300, "Private off-street lighting service –
13 Schedule H-2," which will better reflect the current cost, and
14

15 WHEREAS in order to ease the fee increase for new poles, Tacoma
16 Power proposes a five-year transition to the cost-based fee, and at the end of
17 five years, the pole fees for private off-street lighting customers will be
18 comparable to the same fees for other customers, and
19

20 WHEREAS Tacoma Power also proposes to eliminate the out-of-date
21 contract requirement in Section 12.06.225, "High voltage general service –
22 Schedule HVG," ("HVG"), since HVG rate class is closed to new customers
23 after April 1, 2021, and the contract requirement is no longer needed to control
24 the access to this rate schedule, and
25
26

1 WHEREAS, in preparation for this request, Tacoma Power has actively
2 sought public input through public presentations with various neighborhood and
3 city councils in communities served by Tacoma Power, as well as interested
4 community organizations, and Tacoma Power has also presented overviews
5 and proposals on revenue, budget and rates to the PUB at different stages of
6 the budget and rate development since early 2022; Now, Therefore,
7

For purposes of the determination of Billing Demand in subsection 2 above, the 11 months of history shall be carried forward from the customer's previous account(s).

D. Standby Capacity.

That amount of power requested by written application or estimated by the Director to be made continuously available for exclusive use of the customer.

E. Customer-Owned Generation: *Effective January 1, 2021.*

1. Any customer taking service under this schedule is eligible to sell to Tacoma Power the quantity of generation that exceeds its actual demand over an hour along with the generation's associated Renewable Energy Credits (REC), as defined by RCW 19.285.030, provided that such a customer:

- (a) utilizes solar photovoltaic (PV) arrays sized not greater than 2 MW, or
- (b) owns generation and has an agreement with Tacoma Power that provides for:
 - (i) compensation of excess generation under this rate schedule,
 - (ii) the purchase of Standby Capacity in the amount of no less than the expected energy output of the generator, and
 - (iii) the recovery of the cost of integration into Tacoma Power's system.

This section shall not apply to customer-owned generation facilities with a capacity less than 100 kW, which are subject to Tacoma Power's net metering requirements under RCW 80.60.030.

2. To participate, an eligible customer must comply with the following subsections (a), (b), and (c):

- (a) Enter into a generator interconnection agreement with Tacoma Power and comply with all its terms. Tacoma Power may adopt any generator interconnection requirements as necessary to protect public safety, system reliability, or other regulatory requirements.

The customer may retain ownership of all environmental, social, REC, and other non-power attributes of the electricity produced by the generator that is consumed on-site.

(c) Pay for a two-way advanced meter that is selected and installed by Tacoma Power at the generator that will be used to measure kilowatt-hours of inbound retail energy consumed by the customer's load and the outbound exported generation. Customers totalizing multiple meters may integrate customer-owned generation into their totalized service consistent with Tacoma Power's policies for meter totalization. Otherwise, meter aggregation across multiple customer premises shall not be permitted.

3. Any electricity produced by the customer's generation may be used to reduce inbound retail electricity consumption in accordance with this schedule.

4. The price Tacoma Power shall pay the customer for the quantity of excess generation delivered to Tacoma Power shall equal the quantity, as measured by the advanced meter over each hour, multiplied by:

(a) if available, the applicable Pricing Node of the Real-time Dispatch price of Energy Imbalance Market where the generator is located, as determined by the California Independent System Operator under its market tariff, or

(b) a published index price for firm energy at the Mid-Columbia applicable to the time in which energy was delivered;

(c) plus \$4.43 for each REC transferred to Tacoma Power.

If excess generation is provided during any hour in which the advanced meter fails to record generation, Tacoma Power shall estimate the quantity of excess generation.

F. Service Conditions.

1. At the option of Tacoma Power, primary metering may be installed where the service transformers aggregate 500 kVA or more.

2. At the option of Tacoma Power, a customer may be transferred to a non-demand metered rate if the customer's actual demand has not exceeded 50 kilovolt amperes in the prior 24-month period.

C. Billing Demand.

Determined by means of a demand meter, 30-minute interval. The Billing Demand shall be the highest of:

1. The highest measured demand for the month adjusted for power factor;
2. 60 percent of the highest measured demand occurring during any of the preceding 11 months after adjustment for power factor; or
3. 100 percent of the standby capacity.

For purposes of the determination of Billing Demand in subsection 2 above, the 11 months of history shall be carried forward from the customer's previous account(s).

D. Standby Capacity.

That amount of power requested by written application or estimated by the Director to be made continuously available for exclusive use of the customer.

E. Customer-Owned Generation: *Effective January 1, 2021.*

1. Any customer taking service under this schedule is eligible to sell to Tacoma Power the quantity of generation that exceeds its actual demand over an hour along with the generation's associated Renewable Energy Credits (REC), as defined by RCW 19.285.030, provided that such a customer:

- (a) utilizes solar photovoltaic (PV) arrays sized not greater than 2 MW, or
- (b) owns generation and has an agreement with Tacoma Power that provides for:
 - (i) compensation of excess generation under this rate schedule,
 - (ii) the purchase of Standby Capacity in the amount of no less than the expected energy output of the generator, and
 - (iii) the recovery of the cost of integration into Tacoma Power's system.

This section shall not apply to customer-owned generation facilities with a capacity less than 100 kW, which are subject to Tacoma Power's net metering requirements under RCW 80.60.030.

2. To participate, an eligible customer must comply with the following subsections (a), (b), and (c):

- (a) Enter into a generator interconnection agreement with Tacoma Power and comply with all its terms. Tacoma Power may adopt any generator interconnection requirements as necessary to protect public safety, system reliability, or other regulatory requirements.
- (b) Transfer to Tacoma Power ownership of all environmental, social, REC, and other non-power attributes of the electricity generated in excess of that consumed by the customer. The customer may retain ownership of all environmental, social, REC, and other non-power attributes of the electricity produced by the generator that is consumed on-site.

(c) Pay for a two-way advanced meter that is selected and installed by Tacoma Power at the generator that will be used to measure kilowatt-hours of inbound retail energy consumed by the customer's load and the outbound exported generation. Customers totalizing multiple meters may integrate customer-owned generation into their totalized service consistent with Tacoma Power's policies for meter totalization. Otherwise, meter aggregation across multiple customer premises shall not be permitted.

3. Any electricity produced by the customer's generation may be used to reduce inbound retail electricity consumption in accordance with this schedule.

4. The price Tacoma Power shall pay the customer for the quantity of excess generation delivered to Tacoma Power shall equal the quantity, as measured by the advanced meter over each hour, multiplied by:

(a) if available, the applicable Pricing Node of the Real-time Dispatch price of Energy Imbalance Market where the generator is located, as determined by the California Independent System Operator under its market tariff, or

(b) a published index price for firm energy at the Mid-Columbia applicable to the time in which energy was delivered;

(c) plus \$4.43 for each REC transferred to Tacoma Power.

If excess generation is provided during any hour in which the advanced meter fails to record generation, Tacoma Power shall estimate the quantity of excess generation.

F. Service Conditions.

1. At the option of Tacoma Power, primary metering may be installed where the service transformers aggregate 500 kVA or more.

2. At the option of Tacoma Power, a customer may be transferred to a non-demand metered rate if the customer's actual demand has not exceeded 50 kilovolt amperes in the prior 24-month period.
